

Dynamic Laser Applications

Design is all around us, everyday, everywhere you look. But nowhere can design be more important, and perhaps more unexpected, than the floors on which we walk. DLA strives to bring beautiful, cutting-edge design into the traditional world of hardwood flooring. From classic renaissance painting recreations, to bold, contemporary whole floor designs, wood can be used as creatively as a brush and paint to create beautiful works of art on which to walk. Virtually any subject can be crafted in the medium of wood. DLA's medallions and borders are produced in much the same manner as a puzzle, where each "piece" can be a different species of wood, and when utilizing such components as wood grain direction, color-dyeing, and various species, can create a beautifully rich depiction of the subject, no matter how simple or complex. DLA meets new custom challenges everyday DLA make each order exceptional in its design quality, Helping the client by showing them all the design options and possibilities wood flooring presents is what DLA is about.
